SUMMARY

Full-stack engineer with 3 years of experience building production SaaS with TypeScript, Next.js and PostgreSQL. At Grayola, a design platform used by teams at HubSpot, Rockstart and Latam Fintech, owned billing and payments on Stripe and built an AI pricing system that quotes 72% of client briefs automatically.

EXPERIENCE

Full-Stack Developer · Grayola

Sep 2025 – Oct 2026

Contract · Remote

*Design subscription platform (**grayola.io**) used by teams at HubSpot, Rockstart and Latam Fintech: brands buy design work with credits and freelance designers are paid per delivered project. Early-stage startup with one to two engineers. Rehired in 2025 after the 2024 project that became Suuper (below).*

- Built and owned billing and payments end to end: B2B subscriptions on Stripe Billing (plans from $450 to $1,500 a month), the credit system clients spend on projects, payouts to freelance designers on Stripe Connect, and a ledger that reconciles against Stripe.
- Built the AI-assisted pricing running in production: 72% of client briefs quoted automatically, 88% of its suggestions accepted unchanged by staff.
- Built internal tools for operations and marketing: a view-as-customer mode in the admin panel, a promotions engine that launches campaigns without code, and the API endpoints behind their n8n email campaigns for activation and retention.
- Cut dashboard load time 31% (TTFB from 1,030 to 710 ms) by parallelizing data reads.
- Wrote the codebase's engineering conventions, followed by both engineers and their AI coding agents, and technical specs before high-risk changes.

Stack: Next.js, React, TypeScript, Supabase (PostgreSQL, row-level security, Edge Functions), Stripe Billing and Connect, Vercel AI SDK.

Frontend Lead (promoted from Full-Stack Developer in six months) · Suuper

Aug 2024 – Jul 2025

Contract · Remote

SaaS that brings Grayola's platform model to agencies. Started as a Grayola project in Aug 2024 and became its own company.

- Built the product from scratch with the core team and design lead: reusable UI components for its core features and backend functionality in Next.js, Supabase and SQL.
- Cut page load times across most of the app by an estimated 2 seconds through query optimization, caching, React Server Components and link prefetching.
- Led two developers on the frontend: code reviews, debugging support and the component conventions they built on.

Frontend Developer Intern · DASCalendar

Jan 2024 – Jun 2024

Remote · Scheduling SaaS, 500 Global LatAm Batch 18

- Built calendar and scheduling features for a SaaS platform in React and TypeScript, and refactored UI components for consistency and readability.

SKILLS

Core: TypeScript, React, Next.js, Node.js, PostgreSQL, Supabase, Tailwind CSS
Payments: Stripe Billing, Stripe Connect, webhooks, idempotency, ledger reconciliation
AI: Vercel AI SDK, LLM structured output, Claude Code
Also: TanStack Query, Zod, pgTAP, n8n, Resend, Vercel, Git
Languages: Spanish (native), English (C1, EF SET certificate)

EDUCATION

Henry Bootcamp · Full-Stack Web Development · Jun 2022 – Jan 2023 · 700+ hours of hands-on training
Universidad del Valle · Business Administration, 6 semesters completed · Aug 2018 – Mar 2022 · Cali, Colombia
